

Task-2 Digital Portfolio

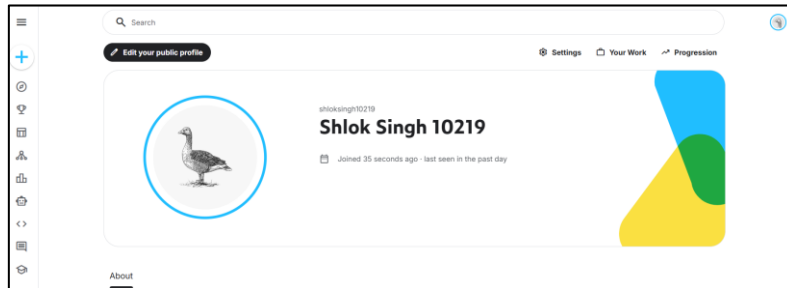

Figure 1: Profile Screen shot of Kaggle

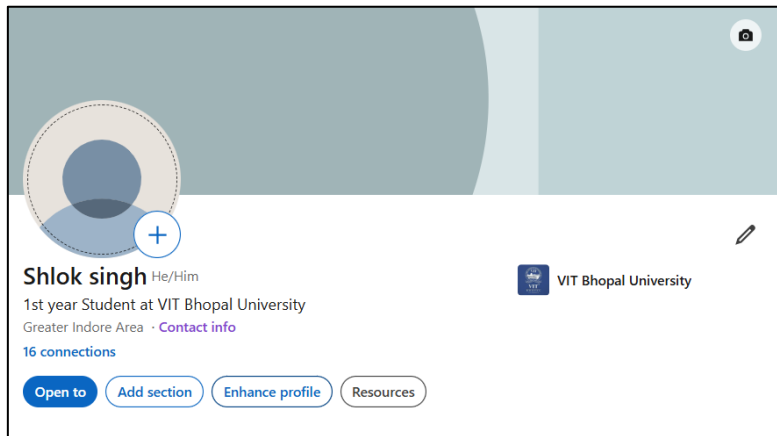

Figure 2: Profile Screen shot of LinkedIn

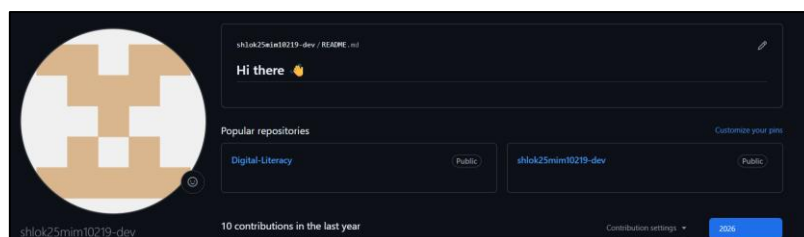

Figure 3: Profile Screen shot of Github

For this task, I created and updated my profiles on three important platforms: **LinkedIn, GitHub, and Kaggle**. I chose these platforms because each of them serves a different purpose and together they help in building a complete digital presence as a student. LinkedIn is mainly used for professional networking and helps in showcasing education, achievements, and future goals. GitHub is useful for sharing coding projects and tracking progress in technical skills, while Kaggle is focused on data science and helps in learning through real datasets and competitions.

I added my basic details such as name, education, and a brief introduction to keep my profiles simple and professional. I also created a GitHub profile README to introduce myself and mention my learning goals. Screenshots of all these profiles have been included as proof of setup.

I plan to actively use these platforms over the next four years by regularly updating my work, participating in coding challenges, and connecting with professionals. This task helped me understand the importance of maintaining an authentic and consistent digital presence from the beginning of my academic journey.
