

Digital Literacy Project Report

Course Code: CSE0001

Course Title: Digital Literacy

Name: Shlok Singh

Registration Number: 25MIM10219

Branch: Int.M.techAI

Year: 1st Year

University: VIT Bhopal University

Submission Date: 31 March 2026

Introduction :

This project was assigned to help students understand the importance of digital literacy in today's academic and professional environment. As a student digital ambassador, the objective was to explore different digital tools, build an online presence, and learn how to communicate and behave responsibly in digital spaces. The project consisted of five tasks covering areas such as awareness, portfolio creation, coding platforms, communication etiquette, and cyber safety.

Through this project, I gained practical experience using tools like Canva, GitHub, LinkedIn, Google Forms, and HackerRank. It also helped me understand that digital literacy is not just about using technology, but about using it responsibly, ethically, and effectively. This project provided a balanced combination of practical activities and personal reflection, making it a valuable learning experience.

Task 1 :

For this task, I created a digital literacy awareness infographic using Canva. I also took limited help from AI tools for generating ideas and visuals, but the overall design and layout were completed by me. The infographic covered five important topics: what digital literacy is, useful digital tools for students, safe internet practices, professional online presence, and email etiquette.

The aim was to present all key aspects of digital literacy in a simple and visually engaging format. I focused on making the design informative while keeping it easy to understand. One of the main challenges I faced was aligning images properly and maintaining a balanced layout across different sections. Additionally, finding or generating images that matched the topics and had the correct size was also difficult.

Despite these challenges, this task helped me improve my design skills and understand how visual communication can make complex ideas more accessible.

Task 2 :

In this task, I created and updated my profiles on LinkedIn, GitHub, and Kaggle to build a basic digital portfolio. I chose these platforms because each serves a different purpose. LinkedIn helps in professional networking and showcasing education, GitHub is useful for sharing coding projects, and Kaggle supports learning in data science and problem-solving.

I added my basic academic details and created a GitHub profile README to introduce myself and my learning goals. Screenshots of all profiles were included as proof. This

task helped me understand the importance of maintaining a professional and authentic digital identity from the beginning.

In the future, I plan to regularly update these platforms by adding projects, participating in coding challenges, and connecting with professionals. This will help me build a strong digital presence over time.

Task 3:

For this task, I used HackerRank and Google Forms. On HackerRank, I solved a beginner-level Python problem, which helped me understand basic coding concepts and how to work on an online coding platform.

For collaboration, I created a digital literacy quiz using Google Forms. The quiz included multiple-choice and short-answer questions. I also viewed responses in Google Sheets, which helped me understand how data is collected and analyzed.

This task improved my problem-solving skills and introduced me to useful digital tools for collaboration. These platforms will help me academically by supporting learning, improving coding ability, and enabling me to create interactive tools for assignments and projects.

Task 4 :

A common example of poor digital communication is when a student sends an informal or unclear email to a professor, such as writing “Send notes ASAP” without proper structure. This can be misunderstood as rude or careless, even if not intended.

Such situations can be avoided by following proper email etiquette, including a clear subject line, polite greeting, structured message, and respectful closing. Professional communication helps create a positive impression and increases the chances of receiving a helpful response.

This task helped me understand the importance of maintaining clarity, respect, and professionalism in digital communication.

Task 5 :

While researching identity theft, I was surprised to learn how easily personal information can be misused without the victim realizing it. I always thought such cybercrimes required advanced skills, but even small mistakes like sharing personal details can lead to serious consequences.

This made me reflect on my own habits. One important change I will make is being more careful while sharing information online and verifying links before taking action. I also plan to use stronger security measures like two-factor authentication.

This task helped me understand that cyber safety depends on awareness and responsible behavior.

Conclusion:

Overall, this project helped me understand that digital literacy is not just about using technology, but about using it responsibly and effectively. Through different tasks, I learned about communication, online identity, collaboration, and cyber safety. It also improved my practical skills and awareness of digital risks. This project has encouraged me to become more careful and thoughtful in my digital activities and to continuously improve my digital habits.
