

Task 1 – Digital Literacy Infographic

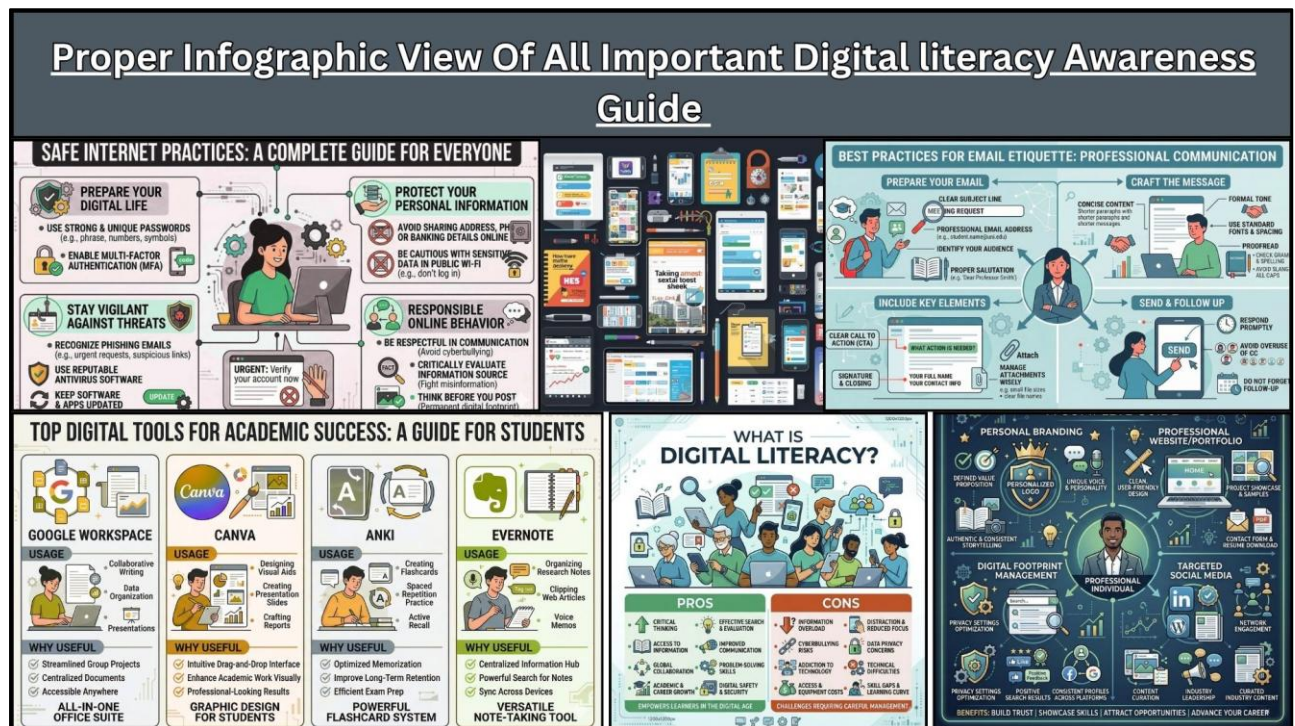

Figure 1: Digital Literacy Awareness Infographic created using Canva

For this task, I created a digital literacy awareness infographic using **Canva** as my main design tool. I also took limited help from AI tools like Gemini for generating some ideas and visuals, but the overall design, layout, and final execution were done by me. The infographic focuses on five key areas: understanding what digital literacy is, useful digital tools for students, safe internet practices, professional online presence, and email etiquette.

The goal of my design was to present all important aspects of digital literacy in a single, easy-to-understand visual format. I tried to keep the content balanced by combining both informative text and relevant visuals so that it becomes engaging as well as educational.

One of the main challenges I faced during this task was aligning all the images properly within the layout. Since the infographic included multiple sections, maintaining consistent spacing and structure was difficult. Another issue was finding or generating images that matched the topic and had the correct size and proportion. Despite these challenges, this task helped me improve my design skills and understand how to present information clearly using digital tools.
